

The graph illustrates the logarithmic trend of incidence (Log Inc) over time (Zabelê/PB). The y-axis is a logarithmic scale from 10^0 to 10^1 . The x-axis spans from October 2020 to November 2022. A black line represents the moving average, and red stars represent individual data points. The data shows a major peak in late 2021, reaching a value of approximately 10, followed by a decline and then a smaller peak in early 2022.
