

The graph displays the logarithmic incidence of COVID-19 in Ibirajuba/PE. The y-axis, labeled 'Log Inc', uses a logarithmic scale with major ticks at 10^0 and 10^1 . The x-axis shows dates from 06/18/2020 to 07/14/2022. A black line represents the 'Moving Average' and red stars represent 'Data of citie'. The incidence remains relatively low (around 10^0) until late 2020, then rises to a peak of approximately 4 in early 2021. It remains around 3 until late 2021, when it spikes sharply to over 10. Following this peak, it declines to around 2-3 by early 2022, with a small secondary peak in late 2021.
