

The graph displays the logarithmic incidence of COVID-19 in São Domingos/PB. The y-axis, labeled 'Log Inc', is on a logarithmic scale with major ticks at 10^0 and 10^1 . The x-axis shows dates from 08/03/2020 to 06/06/2022. A black line represents the 'Moving Average' and red stars represent 'Data of citie'. The incidence starts near 10^0 in early 2020, rises to a peak of approximately 5 in early 2021, then declines. A second, higher peak occurs in mid-2021, reaching nearly 10^2 on the log scale. This is followed by a sharp decline and a period of low incidence in late 2021. A resurgence occurs in early 2022, with the incidence rising again towards 10^1 .
