

The figure is a semi-logarithmic plot titled "Queluzito/MG". The vertical axis (y-axis) is labeled "Log Inc" and uses a logarithmic scale with major ticks at 10^0 and 10^1 . The horizontal axis (x-axis) represents time, with major ticks labeled at 10/15/2020, 03/23/2021, 06/18/2021, 01/27/2022, and 06/07/2022. The plot contains two data series: a "Moving Average" represented by a solid black line, and "Data of citie" represented by red star markers. The black line shows a significant peak in early 2022, reaching above 10^1 on the log scale. The red stars represent individual data points, showing a similar trend but with more variability, including a very high point in early 2022.
