

The figure is a semi-logarithmic plot titled "Santo Antônio de Goiás/GO". The vertical axis is labeled "Log Inc" and uses a logarithmic scale with major ticks at 10^0 , 10^1 , and 10^2 . The horizontal axis represents time, with labels for 06/11/2020, 02/17/2021, 08/16/2021, 04/27/2022, and 11/23/2022. Two data series are plotted: a black line for the "Moving Average" and red stars for the "Data of citie". The plot shows several waves of infection. A significant peak occurs in early 2022, where the moving average and individual data points reach values above 10^1 , with some points exceeding 10^2 . There are also periods of low activity, particularly in late 2021 and late 2022, where values drop to 10^0 .
