

The chart displays the progression of COVID-19 cases in Barra de São Miguel, Paraíba. The y-axis, labeled 'Log Inc', uses a logarithmic scale to represent the number of incidents, ranging from 10^0 to 10^1 . The x-axis marks time from late 2020 to late 2022. The 'Moving Average' (black line) shows a major peak in late 2021, reaching nearly 10^1 on the log scale, and a secondary, lower peak in late 2022. The 'Data of citie' (red stars) shows individual daily or near-daily reports, with many points at 10^0 and several points reaching the peak level in late 2021.
