

The graph illustrates the progression of COVID-19 cases in São Francisco de Paula, Minas Gerais, over a two-year period. The logarithmic y-axis represents the number of cases (Log Inc), while the x-axis marks specific dates. The 'Moving Average' line provides a smoothed view of the data, highlighting major peaks and troughs. The 'Data of citie' points show individual daily or periodic reports, with some notable outliers reaching nearly 100 cases in early 2021 and mid-2022.
