

The figure is a semi-logarithmic plot titled "Caseiros/RS". The y-axis is labeled "Log Inc" and uses a logarithmic scale with major ticks at  $10^0$  and  $10^1$ . The x-axis represents time, with labels for 06/04/2020, 01/13/2021, 05/12/2021, 08/28/2021, and 08/03/2022. The plot contains two data series: "Moving Average", represented by a solid black line, and "Data of citie", represented by red stars. The black line shows a highly volatile trend with several peaks, notably around late 2020 and early 2021, followed by a period of low activity and then a sharp decline in mid-2021. The red stars represent individual data points, many of which are clustered at the  $10^0$  level, with some outliers reaching above  $10^1$  in early 2021.
