

The figure is a semi-logarithmic plot titled "Palmelo/GO". The y-axis is labeled "Log Inc" and uses a logarithmic scale with major ticks at 10^0 and 10^1 . The x-axis represents time, with labels for 07/02/2020, 01/28/2021, 08/05/2021, 02/23/2022, and 09/09/2022. The plot contains two data series: a black line representing the "Moving Average" and red stars representing the "Data of citie". The data shows a highly volatile trend with several peaks, notably around late 2020, mid-2021, and early 2022, where the log incidence reaches values above 10. There are also periods of low incidence, particularly in early 2021 and late 2022, where the log incidence drops below 1. The "Data of citie" points generally follow the trend of the "Moving Average" line, with some outliers.
