

The figure is a semi-logarithmic plot titled "Nova Aurora/GO". The y-axis is labeled "Log Inc" and uses a logarithmic scale with major ticks at  $10^0$  and  $10^1$ . The x-axis represents time, with labels for 06/26/2020, 12/30/2020, 05/13/2021, 01/25/2022, and 11/17/2022. The plot contains two data series: "Moving Average", represented by a solid black line, and "Data of citie", represented by red stars. The black line shows a highly variable trend with several peaks and troughs, including a significant dip below  $10^0$  around mid-2021. The red stars represent individual data points, many of which are clustered at  $10^0$ , but several points reach values between  $10^0$  and  $10^1$  throughout the period, with a notable cluster of higher values in late 2021 and early 2022.
