

The figure is a semi-logarithmic plot showing the progression of COVID-19 cases in Córrego Novo, Minas Gerais. The y-axis, labeled 'Log Inc', uses a logarithmic scale with major ticks at 10^0 and 10^1 . The x-axis displays dates from April 7, 2020, to February 6, 2022. A solid black line represents the 'Moving Average' of daily cases, while red stars represent individual 'Data of citie' (city data). The data shows an initial period of low activity, followed by a major surge peaking in early 2021 at approximately 10 cases. After a period of relative stability and minor fluctuations, there is a sharp increase starting in early 2022, reaching nearly 10 cases again by late January 2022.
