

The graph illustrates the progression of COVID-19 cases in Ibituruna, Minas Gerais, from late 2020 to early 2022. The logarithmic y-axis represents the number of cases (Log Inc), while the x-axis marks specific dates. The black line indicates the moving average, and the red stars represent daily reported cases. The data shows a major wave peaking in early 2021, a period of relative stability and low case counts through mid-2021, and a second, even more intense wave beginning in late 2021 and peaking in early 2022.

Date	Log Inc (Approximate)
11/10/2020	1.1
01/01/2021	1.2
02/15/2021	10.5
03/15/2021	7.5
04/15/2021	2.5
05/26/2021	6.5
06/15/2021	4.5
07/15/2021	2.5
08/15/2021	4.5
09/04/2021	2.0
10/15/2021	12.0
11/15/2021	30.0
12/15/2021	100.0
01/17/2022	12.0
