

The graph illustrates the logarithmic trend of incidence in Iguatama/MG. The y-axis, labeled 'Log Inc', uses a logarithmic scale from 10^0 to 10^2 . The x-axis represents time from February 2020 to late 2022. A black line represents the moving average, while red stars represent daily data points. The data shows a major peak in late 2021, followed by a decline and subsequent fluctuations at lower levels.
