

The graph displays the logarithmic incidence of COVID-19 cases in Minador do Negrão/AL. The y-axis, labeled 'Log Inc', uses a logarithmic scale from 10^0 to 10^1 . The x-axis marks time with dates: 06/08/2020, 12/12/2020, 06/19/2021, 01/09/2022, and 09/10/2022. The 'Moving Average' (black line) and 'Data of citie' (red stars) both show three major waves of infection. The first wave peaks around late 2020, the second around mid-2021, and the third, highest wave peaks in early 2022, reaching a log incidence of approximately 10. The data points (red stars) show significant daily fluctuations, while the moving average (black line) provides a smoothed trend.
