

The graph displays the logarithmic incidence of COVID-19 in São Nicolau/RS. The y-axis, labeled 'Log Inc', uses a logarithmic scale with major ticks at  $10^0$  and  $10^1$ . The x-axis shows dates from August 2020 to July 2022. The 'Moving Average' (black line) shows two major peaks: one in early 2021 reaching approximately 3.5, and a higher peak in early 2022 reaching approximately 4. The 'Data of citie' (red stars) shows individual data points, with several points reaching above  $10^1$  in early 2021 and early 2022. A legend in the top right corner identifies the black line as 'Moving Average' and the red stars as 'Data of citie'.
