

The chart displays the logarithmic incidence of COVID-19 in Irajuba, Bahia. The y-axis, labeled 'Log Inc', uses a logarithmic scale from 10^0 to 10^1 . The x-axis shows dates from November 2020 to July 2022. The 'Moving Average' (black line) and 'Data of citie' (red stars) both show a major peak in late 2020, followed by a decline and then a resurgence in early 2021. A third, very high peak is visible in mid-2021, reaching above 10^1 on the log scale. The data points (red stars) often show higher values than the moving average, particularly during the peaks.
