

The graph illustrates the progression of COVID-19 cases in Bom Sucesso de Itararé, SP, over a two-year period. The logarithmic y-axis represents the number of cases (Log Inc), while the x-axis marks specific dates. The black line indicates the moving average, which shows a major surge in early 2022, peaking at approximately 40 cases before declining. The red stars represent individual daily data points, showing a high frequency of single cases (10^0) and a few higher values, including one outlier near 150 cases in early 2022.
