

The figure is a semi-logarithmic plot showing the logarithm of incidence (Log Inc) over time (Ibiam/SC). The y-axis is logarithmic, with major ticks at 10^0 and 10^1 . The x-axis represents time, with labels for 07/17/2020, 02/11/2021, 05/22/2021, 01/31/2022, and 08/09/2022. The plot contains two data series: a black line representing the 'Moving Average' and red stars representing 'Data of citie'. The data shows a sharp increase in incidence starting in late 2020, peaking in early 2021 at approximately 10^1 , followed by a decline and then a resurgence in early 2022, reaching another peak around 10^1 .
