

The figure is a semi-logarithmic plot titled "Lagoa Seca/PB". The y-axis is labeled "Log Inc" and uses a logarithmic scale with major ticks at 10^0 and 10^1 . The x-axis represents time, with major ticks labeled at 05/02/2020, 12/05/2020, 05/15/2021, 11/26/2021, and 11/27/2022. The plot contains two data series: a black line representing the "Moving Average" and red stars representing the "Data of citie". The black line shows a highly volatile trend with several peaks, notably around late 2020, mid-2021, and late 2021, reaching values above 10^1 . The red stars represent individual data points, showing a wide distribution of values, with many points clustered around 10^0 and others reaching up to 10^2 . The overall trend shows a significant increase in incidence starting in early 2022, peaking in late 2022, and then declining.
